**CAUTION**

### **7-12. Separate Type Signal Receiving Unit Installation**

**CAUTION**

If local electrical codes allow, this signal receiving unit can be mounted using a conventional wall box for flush mounting.

- (1) Insert a standard screwdriver into the gap under the signal receiving unit and pry off the cover (Fig. 7-14)
- (2) Attach the signal receiving unit with the 2 small screws provided.

Use the spacers and take care not to tighten the screws excessively.

If the signal receiving unit will not seat well, cut the spacers to a suitable thickness. (Fig. 7-13)  
(3) Connect the signal receiving unit wiring (2 wires) correctly to the corresponding terminals in the electrical component box of the indoor unit.

**CAUTION**

**If the signal receiving unit is installed near a rapid-start or inverter type fluorescent lamp (neither one uses glow lamps), it may be impossible to receive signals from the wireless remote controller. To avoid signal interference from fluorescent lamps, install the receiving unit at least 6.6 ft. away from the lamps and install at a location where wireless remote controller signals can be received when the fluorescent lamps are on.**

**Do not twist the operating controller wires together with the power supply wires. Doing so can result in malfunction.**

**If electrical noise is induced in the unit power supply, take appropriate measures, for example installing a filter.**

**In wiring, do not connect the signal receiving unit to the adjacent terminal block for the power wiring. Otherwise, the unit will break down.**
