3-16.

Installing the Rear Panel onto the Wall

Confirm that the wall is strong enough to support the unit.

See either Item a) or b) below depending on the wall type.

a) If the Wall is Wooden

(1)

Attach the rear panel to the wall with the 8 screws provided. (Fig. 3-51)

If you are not able to line up the holes in the rear panel with the beam locations marked on the wall, use Rawl plugs or toggle bolts to go through the holes on the panel or drill 5 mm dia. holes in the panel over the stud locations and then mount

the rear panel.

(2)

Check with a tape measure or carpenter's level.

This is important so that the unit is correctly installed. (Fig. 3-52)

(3)

Make sure the panel is flush against the wall. Any space between the wall and unit will cause noise and vibration.

b) If the Wall is Brick, Concrete or Similar

Drill 4.8 mm dia. holes in the wall. Insert Rawl plugs for appropriate mounting screws. (Fig. 3-53)

3-17.

Removing the Grille to Install the Indoor Unit

For preventing the movement of the air-

CAUTION

deflector blades during transportation, a protective gasket was mounted at the air outlet of the air conditioner. Remove the gasket before installation.

(Fig. 3-54)

Before wiring, you should remove the grille as follows:

How to remove the grille

(1)

Set the flap in the horizontal position.

(2)

Remove the screws. (Fig. 3-55)

(3)

Remove the grille.

(4)

When replacing the grille, push the grille at the mark () as shown in Fig. 3-56 until the grille clicks back into place.
