Station Features

Personal Computer Interface (RPCI-DI)

An optional PC interface unit that replaces the normal digital telephone base and provides the telephone with simultaneous computer-telephone interface and voice/data features as described in "Integrated PC Interface (RPCI-DI)" on Page 53.

Pooled Line Buttons

A group of CO lines can appear under one button on digital and electronic telephones. The system can support up to 16 line groups. A station can have up to four buttons for the same group for handling calls in the same group. Pooled and single appearing line buttons are designed for use with loop and ground start lines, not Tie, DID, DNIS, or ANI lines.

Private CO Lines

The system can be programmed to allow certain "private" CO lines to appear only on one digital or electronic telephone.

electronic telephone and is accessible only by that station.

Features

Push-button Dialing

Station Features

All Toshiba telephones are equipped with push-button dial pads.

Release Button

Users can complete a transfer or disconnect from a call and become idle just by pressing an optional

The

Pooled Line Buttons

transfer or disconnect the active call and automatically answer a new incoming call. This is useful for DSS console's telephones or stations that must process many incoming calls.

Remote Retrieval of Held/Parked Calls

A group of CO lines can appear under one button on digital and electronic can support up to 16 line groups. A station can have up to four buttons for handling calls in the same group. Pooled and single appearing line button

Calls placed on hold or parked by a station can be picked up selectively by another station by pressing a feature button or dialing an access code.

Repeat Last Number Dialed

Private CO Lines

The last number dialed by a digital or electronic telephone is stored in system memory, and may be redialed automatically by accessing a CO line and pressing the electronic telephone and is accessible only by that station.

Ringing Line Preference

Push-button Dialing

A digital or electronic telephone user with this programmable-by-station feature can answer an incoming CO, DID, or Tie line call ringing at their station just by lifting the handset or pressing the

6SNU

Release Button

button, without having to press the button associated with the line.

Saved Number Redial

Users can complete a transfer or disconnect from a call and become idle just by pressing an optional Release button on their digital telephones; going on hook or pressing an optional feature button. The system will automatically redial the saved number when the user

accesses a [DN] or CO line and presses the button again.
