## 2-1. Preparing for Test Run

**Before attempting to start the air conditioner, check the following:**

(1) All loose matter is removed from the cabinet especially steel filings, bits of wire, and clips.

(2) The control wiring is correctly connected and all

**2**

electrical connections are tight.

(3) The protective spacers for the compressor used for transportation have been removed. If not, remove them now.

(4) The transportation pads for the indoor fan have been removed. If not, remove them now.

(5) The power has been supplied to the unit for at least

5 hours before starting the compressor. The bottom of the compressor should be warm to the touch and the crankcase heater around the feet of the compressor should be hot to the touch. (Fig. 2-1)

Power mains switch

(6) Both the gas and liquid tube service valves are open. If not, open them now. (Fig. 2-2)

(7) Request that the customer be present for the test run. Explain the contents of the instruction manual, and then have the customer actually operate the system.

(8) Be sure to give the instruction manual and warranty certificate to the customer.

(9) When replacing the control PCB, be sure to make all the same settings on the new PCB as were in use before replacement.

The existing EEPROM is not changed, and is connected to the new control PCB.

ON

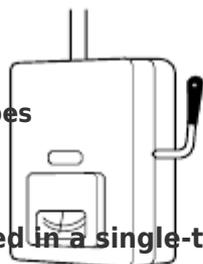

(Power must be turned ON at least 5 hours before attempting test run)

**X, XM, T, U, US, D Types**

**2-2. Caution**

**This unit may be used in a single-type refrigerant system where 1 outdoor unit is connected to 1 indoor unit, and also in a system where 1 outdoor unit is connected to multiple indoor units (maximum 4).**

\* If multiple indoor units are used, also refer to "2-8. System Control".

**The indoor and outdoor unit control PCB utilizes a semiconductor memory element (EEPROM).**

**The settings required for operation were made at the time of shipment.**

**Only the correct combinations of indoor and outdoor units can be used.**

**This test run section describes primarily the procedure when using the wired remote controller.**

**2-3. Test Run Procedure**

Recheck the items to check before the test run.

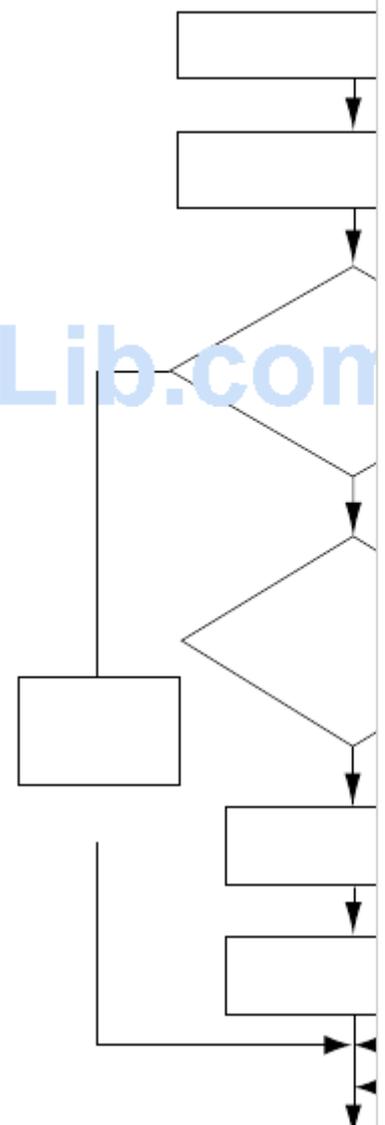

Check the combination (wiring) of indoor and outdoor units.

Is system "single-type"?

YES

(1 indoor unit is connected

- 
- 
- 
- 

to 1 outdoor unit and remote controller)  
 Is group control with multiple outdoor units used?  
 Turn ON the indoor and outdoor power.  
 (Automatic Address)  
 Turn ON the indoor and outdoor power.  
 (\*1)

Indicate (mark) the combination number.  
 Set the remote controller to "test run" operation.  
 Return the remote controller to normal control.

2-2

(See 2-4)  
 (See 2-8-1 to 5)  
 (See 2-8-3)

NO  
 Setting the Outdoor Unit System Address

YES  
 Set the outdoor unit system address.  
 (See 2-8-4)

Automatic Address Setting  
 NO

Automatic  
 Use the remote address controller to perform automatic address setting.  
 (See 2-8-5)  
 (See 2-5)

NO  
 Can  
 Refer to "Table of Self-Diagnostic Functions" started?

to check the system.  
 In addition, refer to 2-8-1 to 5 and correct any items that need to be corrected.

YES  
 Note: Check the indoor-side drainage.  
 (\*1) Required for simultaneous-operation multi systems and for group control.
